

WEEK ONE

SAFETY TIPS FROM CODE ADMINISTRATION

THE SOUND OF SAFETY

What is the most important thing to remember when installing a smoke alarm or carbon monoxide alarm?

Location, location, location!!

Smoke Alarm Safety:

- * Install at least one smoke alarm in every bedroom, outside of each sleeping room area and one on each level of a multi-level building.
- * Test each smoke alarm regularly.
- * Keep batteries fresh by replacing them annually.

Smoke alarms can't help you unless they are functional and you can hear them. Building safety codes require smoke alarms. Contact Code Administration or Fire Prevention for more information.

More information is available at:

www.concordnh.gov/codeadmin/buildingsafety or www.buildingsafetymonth.org

Carbon Monoxide (CO) Alarm Safety:

- * Install a CO alarm in the hallway outside of each sleeping area.
- * Test each CO alarm regularly in accordance with the manufacture's instructions.
- * Permanently wired or plug in CO alarms should have a battery backup. Keep batteries fresh by replacing them annually.

CO alarms can't help you unless they are functional and you can hear them. Building safety codes require CO alarms in all dwelling units that contain a fuel fired appliance and dwelling units that have an attached garage.
